a counterintuitive and compelling argument that existing laws already protect the entirety of our oceans and a call to understand and enforce those protections the world's oceans face multiple threats the effects of climate change pollution overfishing plastic waste and more confronted with the immensity of these challenges and of the oceans themselves we might wonder what more can be done to stop their decline and better protect the sea and marine life such widespread environmental threats call for a simple but significant shift in reasoning to bring about long overdue elemental change in the way we use ocean resources in future sea ocean advocate and marine policy researcher deborah rowan wright

provides the tools for that shift questioning the underlying philosophy of established ocean conservation approaches rowan wright lays out a radical alternative a bold and far reaching strategy of 100 percent ocean protection that would put an end to destructive industrial activities better safeguard marine biodiversity and enable ocean wildlife to return and thrive along coasts and in seas around the globe future sea is essentially concerned with the solutions and not the problems rowan wright shines a light on existing international laws intended to keep marine environments safe that could underpin this new strategy she gathers inspiring stories of communities and countries using ocean resources wisely as well as of successful conservation projects to build up a cautiously optimistic picture of the future for our oceans counteracting all too prevalent reports of doom and gloom a passionate sweeping and personal account future sea not only argues for systemic change in how we manage what we do in the sea but also describes steps that anyone from children to political leaders or indeed any reader of the book can take toward safeguarding the oceans and their extraordinary wildlife

rather than continue to focus on discrete geographically bounded bodies of water ocean advocate and marine policy researcher deborah wright urges a plan sea which reimagines the oceans as the continuous ecosystem it is not disconnected buckets of salt and plankton this book proposes that the global marine environment be protected under the precautionary principle it argues that the policy framework for such protection already exists it just needs to be enforced in a series of case studies with first person vignettes woven throughout wright encourages us to begin every conversation about ocean policy with the assumption that any extractive or polluting activities in the world s oceans should require special permission her argument invokes the public trust doctrine already embedded in many constitutions and hinges on the law of the sea which was established by the u n in 1982 to protect the high seas or the remote parts of the ocean considered international waters to some wright s plan may seem idealistic but its audacity might also be seen as a welcome nudge to our collective imagination many scientists are convinced that ocean ecosystems are on the brink of collapse there s something to be said then for a book that s radical enough to unlock new thinking about what might be possible and maybe necessary in terms of their protection
